The main control dial must first be pulled off through the front cover, then remove the front cover by unclipping it a pain and a fiddle! The dial on the timer can then be pulled off revealing the two mounting screws that hold the timer in!! It is possible that this pump isn't working properly. I think if it weren't working at all, you wouldn't be able to get beyond the wash cycle. It has been my experience that small articles of clothing may get washed or spun out of the inner tub and into the area around the pump pick up, thus partially blocking the flow to the pump. It's also possible that the drain hose from the pump to the drain may be partially clogged. It is also possible that the pump doesn't run sufficiently long to get all of the water out because its motor gets hot and shuts down or because of a problem in the controls mechanism which manages the starting and run time of the pump. Firstly, I would unplug the washer from the wall outlet and probe under the inner tub, or possibly remove the tub to see that there is no blockage from clothing. It's also possible that things left in clothing pockets like paper clips, small plastic items, etc. It should gush out, and tub should be free of standing water prior to the start of the first rinse cycle. If it does not, then you'll have to access the pump and clear it of obstructions or replace it, if defective. A fair handy man can get to pump either from the rear of the machine with back plate off, or by removing the cabinet cover from the frame, depending on the model of the machine. OR If your clothes remain wet after your washer's spin cycle, perform the following diagnostics 1 Lift the lid during the spin cycle. If the tub is not spinning, you may have a damaged motor coupler. Call a repairperson to replace this part. 2 If

the tub is spinning, recheck the load to make sure it is balanced. <http://cdosfera.rinethost.ru/userfiles/8085-manual.xml>

If you are certain the load is balanced but your clothes are still wet, you may need to call a repairperson to replace a damaged motor pulley, tub bearing, belt, or clutch.
